

Unusual, UFO with humanoids Italy 1986  
Location: Vigarano Mainarda, Ferrara, Italy.  
Date: September 27th, 1986.

A husband and wife, while transiting in their car near the piezometer of Vigarano Mainarda, arrived at the height of a furniture factory and observed in the dark, starry sky a huge flying object slowly passing overhead. The object seemed to glow with its own light, had two "wings" that the witnesses at first mistook for "antennas," later the couple estimated its size at about three hundred meters (1000ft). Astonished and frightened they got out of the car, trying to share with other drivers that extraordinary experience, but at that moment no one was passing by. The lady who was expecting her first child began to cry, and her husband reached under the belly of the UFO trying to catch more details. The object began to make a turning maneuver, all in absolute silence, and at that moment the witness could see how what he thought were antennas were actually two huge wings longer than the same aircraft. At this stage he also saw how along one side there were many semicircular portholes that gave glimpses of dark humanoid silhouettes, there were many of them and they

appeared to be as if concerned about something. Having finished its turning maneuver, the object headed first slowly then at incredibly high speed toward the military radar station at Poggio Renatico some four kilometers (2-1/2 miles) away from the site (impossible that nothing turned up on their screens, unless the object was using some kind of radar shielding, Ed.). However, the witnesses saw how so many lights lit up in every direction and had the distinct sensation of a strong energy emitted from various rear nozzles on the object, which within five seconds disappeared from their sight.
